Joint Sealant Coverage Chart

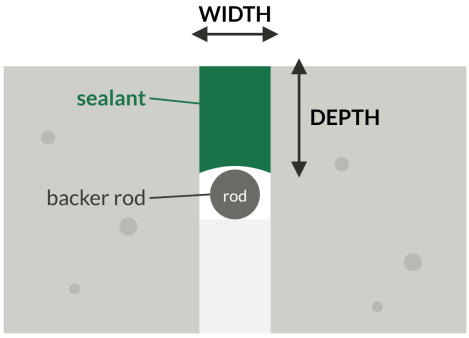

Linear feet of joint filled per container, for square or rectangular joints from 1/8" x 1/8" to 1" x 1".

How to read this chart: find your joint size (width x depth, in inches) on the left, then read across. Each number is the **linear feet of joint** one container will fill.

How the chart works

Joint size is width x depth in inches for a square or rectangular joint, filled completely to the width and depth shown. Container conversions used: 128 oz per gallon; 12 x 10.5 oz tubes per gallon; 4 x 30 oz tubes per gallon; 20 oz per sausage, 6.4 sausages per gallon.

Measuring your joint

Depth is the depth of sealant only. Coverage assumes a square or rectangular sealant profile.
